

Washington Electric Vehicle Population Analysis

ELECTRIC VS GASOLINE

*Current registration patterns, geographic concentration and
stakeholder implications*

Data extracted 23
September 2026

80.7%

Battery electric
share

41.0%

Tesla
share

79.2%

Top five WA
counties

Executive summary

What the current registration
snapshot tells stakeholders

Overview

Three findings for decision makers

- 1. The registered fleet is predominantly battery electric, while PHEVs account for 19.3%.***
- 2. Registrations are highly concentrated. King County alone represents nearly half of Washington records.***
- 3. The registered EV population is heavily represented by recent model years. Among the model years displayed, 2023 has the largest number of vehicles.***

OVERVIEW

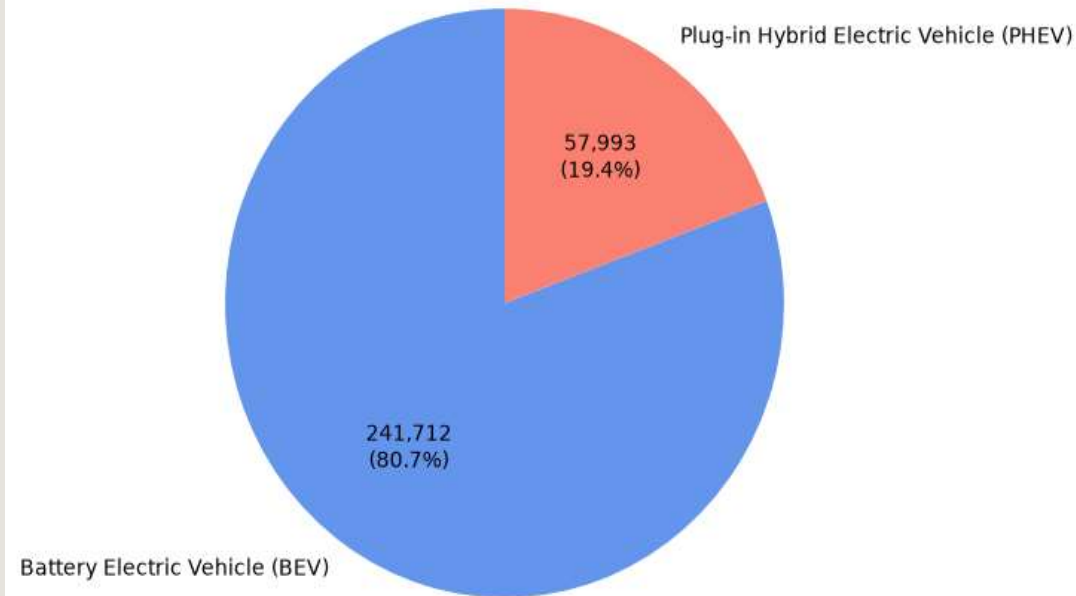

The project analyzes registered EV (Electric-Vehicle) population distributed across manufacturers, models, vehicle types, geography, model years, electric range, and clean-fuel eligibility.

Battery electric vehicles dominate the registered fleet

BEVs account for four of every five records in the current extract

BEV vs PHEV Share of Registrations

241,724 | 80.7%

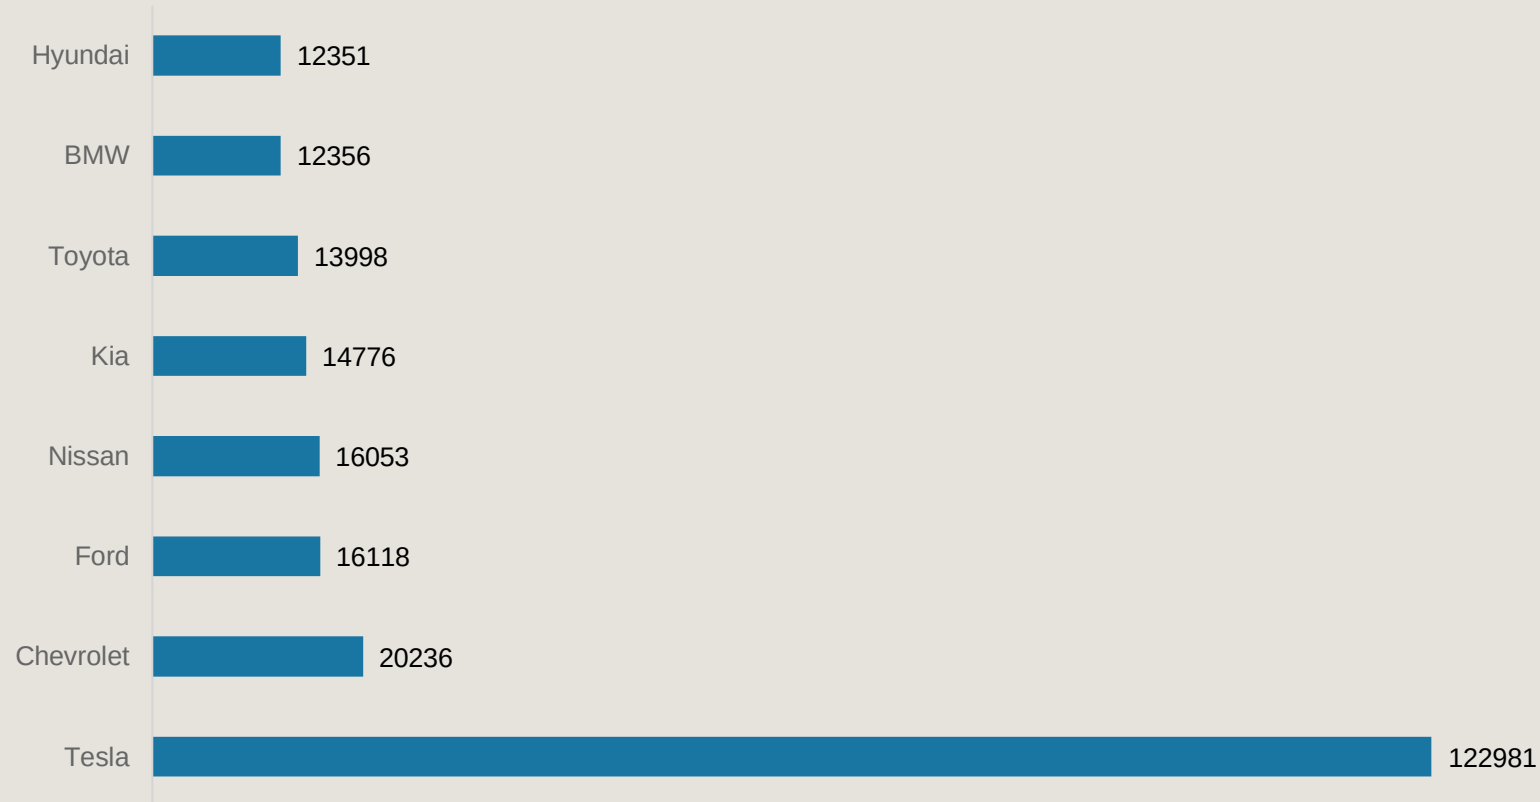

Battery Electric Vehicles

57,981 | 19.3%

Plug-in Hybrid Electric Vehicles

Tesla represents 41% of current registrations

The top five manufacturers account for 63.5% of the dataset

41.0%

Tesla share

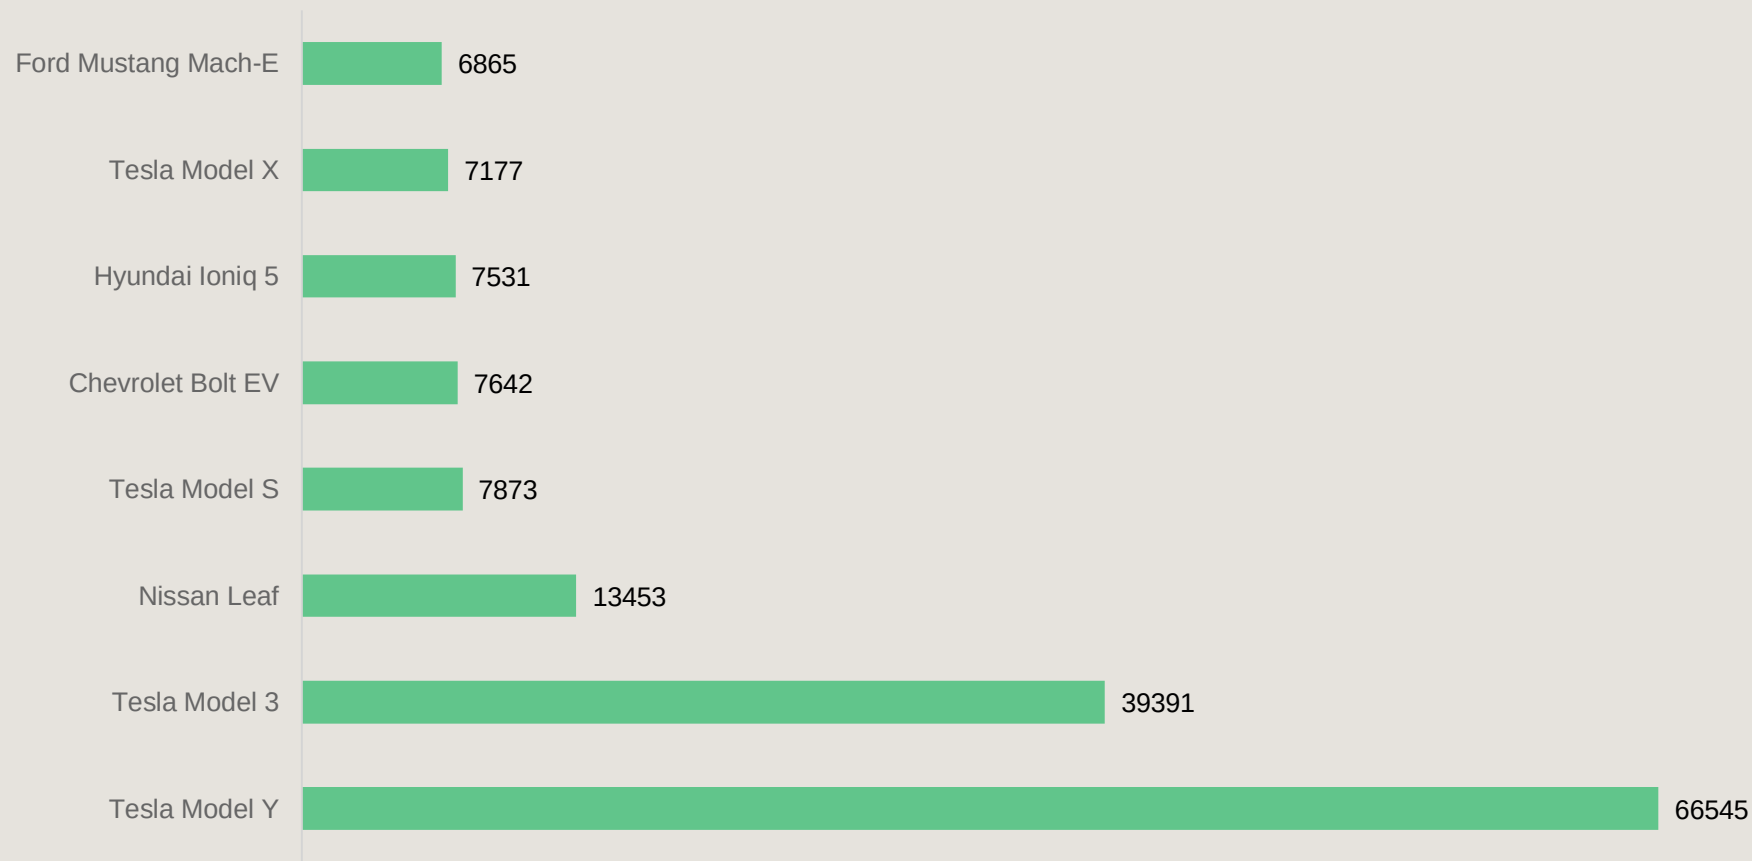

63.5%

Top five makes

Counts describe registrations, not
new-vehicle sales.

Model Y and Model 3 lead the vehicle mix

Tesla's two leading models account for 105,936 registrations

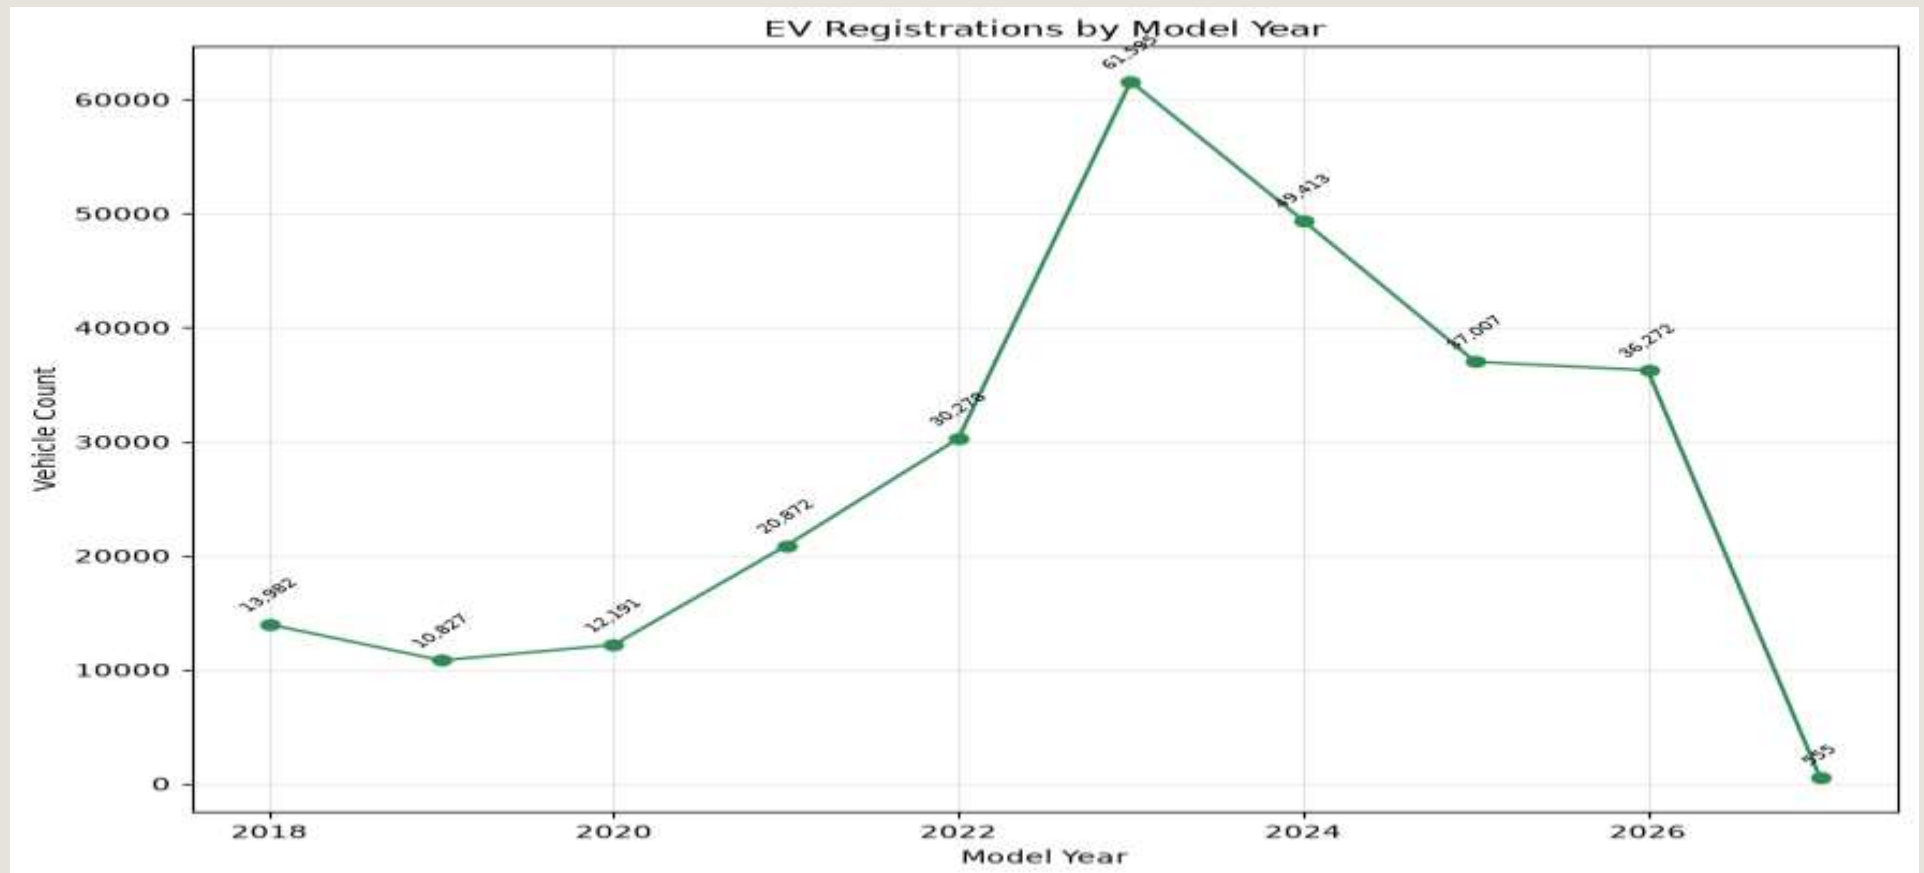

35.3%
Model Y + Model 3
share of all records

202
distinct models

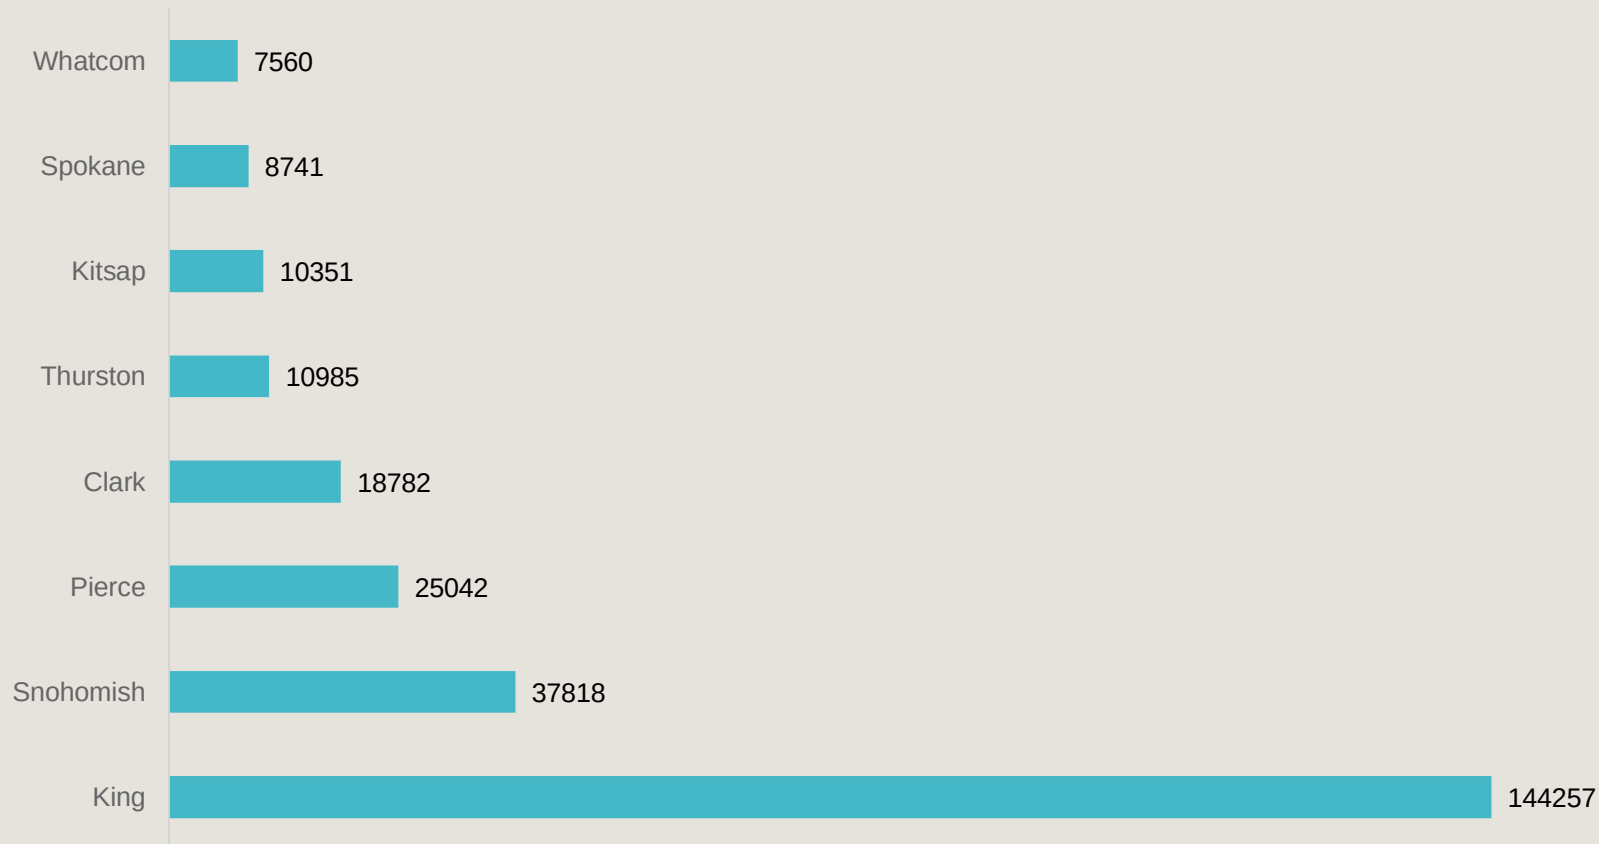

The registered EV population is heavily represented by recent model years. Among the model years displayed, 2023 has the largest number of vehicles

Five counties contain 79.2% of Washington EV records

King County accounts for 48.3% of records with state = WA

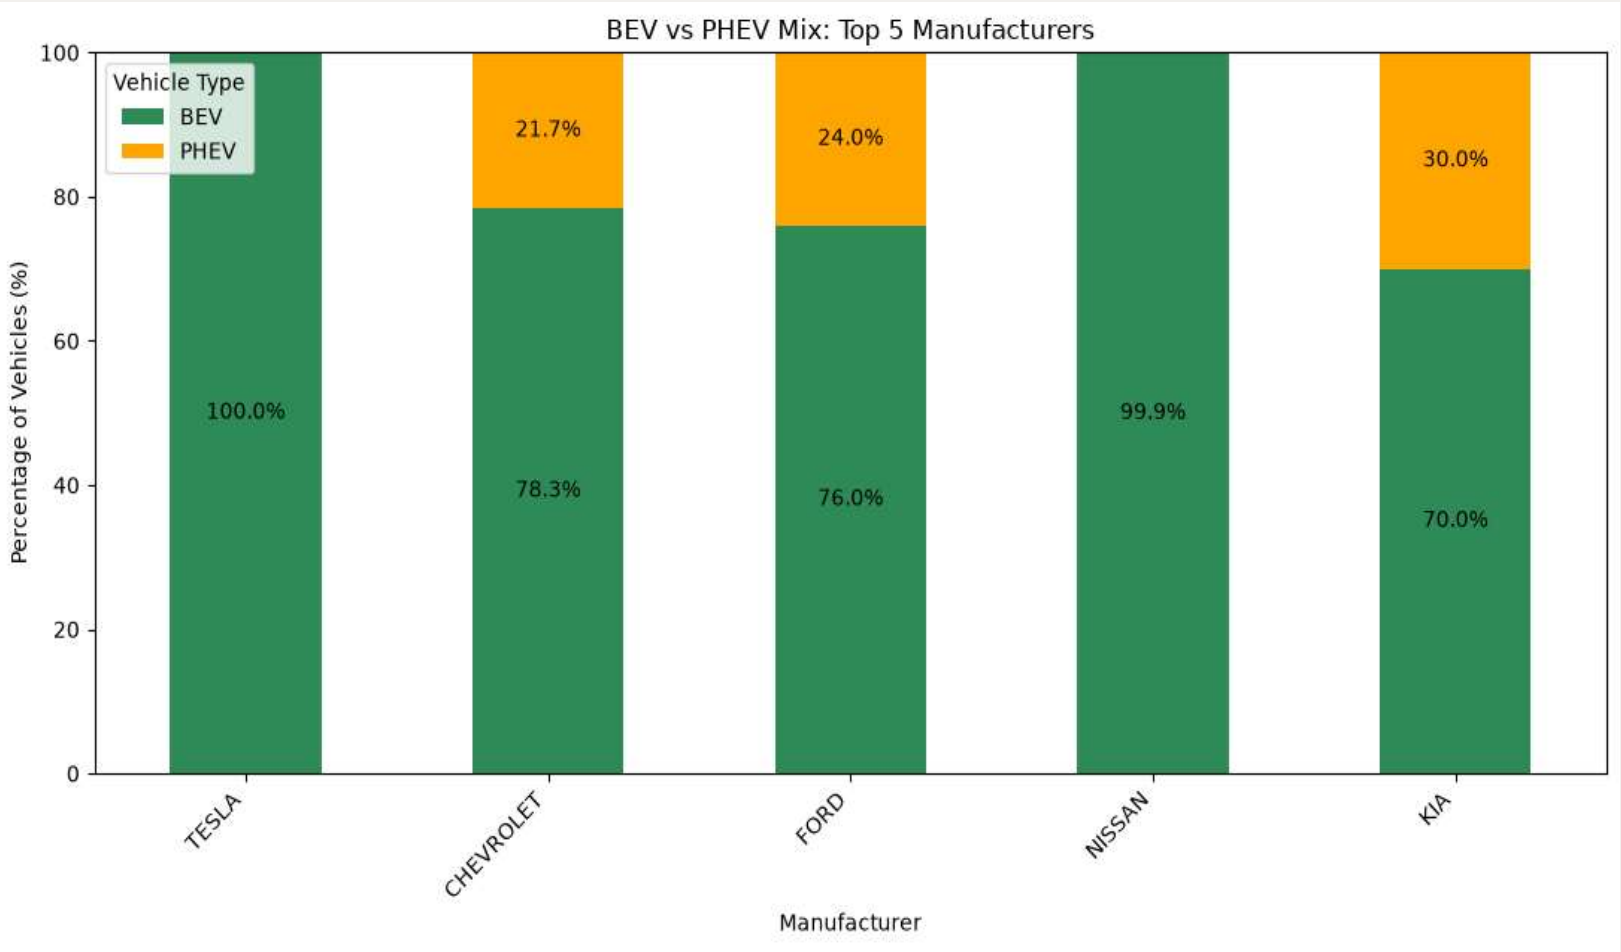

79.2%

Top five counties

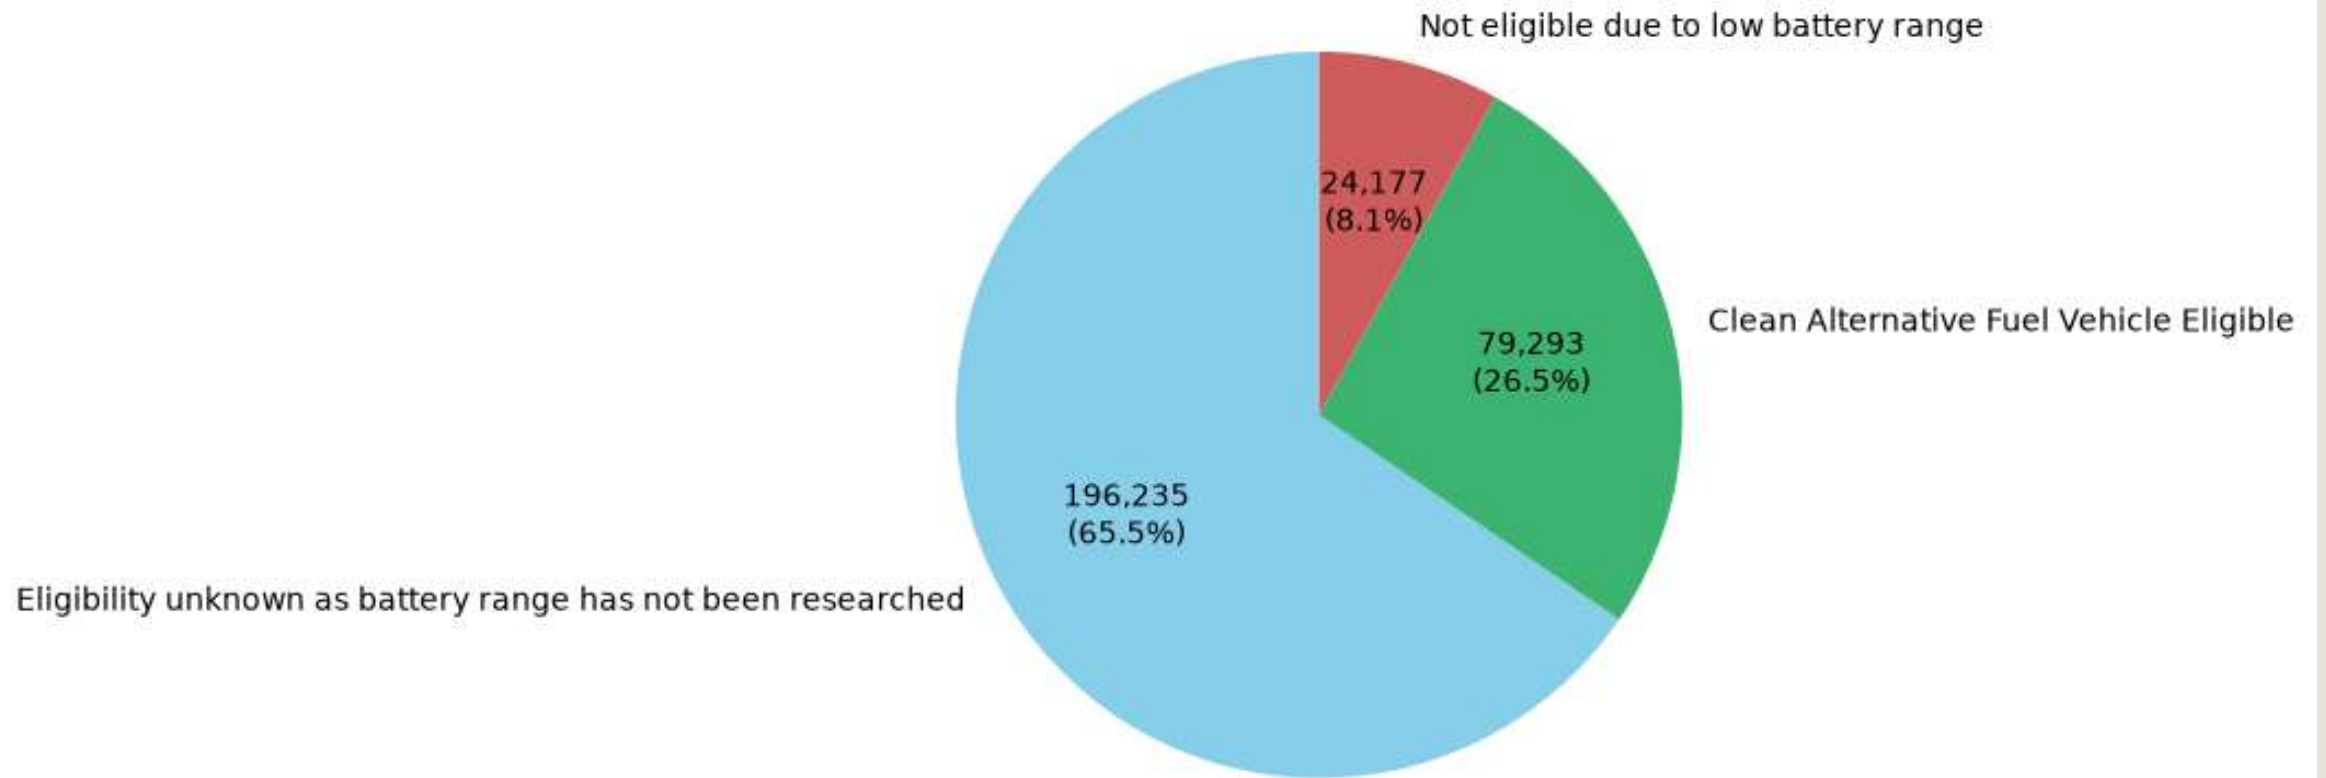

**Use rates for
comparison**

Raw counts reflect
population size. Add county
population or total registered
vehicles before comparing
adoption.

The top manufacturers do not have the same EV mix. Tesla and Nissan are almost entirely represented by BEVs, while Chevrolet, Ford, and Kia have a more mixed BEV/PHEV presence.

CAFV Eligibility Breakdown

Key Insights

- Tesla has a very large presence in the dataset.
- The Model Y, Tesla alone represents approximately 22.2% of the entire dataset. The Model Y and Model 3 combined represent approximately 35.3%.
- BEV dominate the dataset, representing 80.65% of registrations, compared with 19.35% for PHEVs.
- The top manufacturers do not have the same EV mix. Tesla and Nissan are almost entirely represented by BEVs, while Chevrolet, Ford, and Kia have a more mixed BEV/PHEV presence.
- Nearly half of the EV records are associated with King County, showing a strong geographic concentration, the county accounted for 48.1 % of the entire dataset.
- The registered EV population is heavily represented by recent model years. Among the model years displayed, 2023 has the largest number of vehicles.
